

## BIOGRAPHICAL SKETCH

**Author:** Anne Marie Petrock

**Degree:** Doctor of Philosophy

**Date:** May 2007

**Place of Birth:** Morristown, NJ USA

### **Undergraduate and Graduate Education:**

- ◆ Doctor of Philosophy in Biomedical Engineering, New Jersey Institute of Technology, Newark, NJ, 2007
- ◆ Master of Science in Biomedical Engineering, New Jersey Institute of Technology, Newark, NJ, 2002
- ◆ Bachelor of Science in Electrical Engineering, New Jersey Institute of Technology, Newark, NJ, 1999

### **Presentations and Publications:**

- A. M. Petrock.; S. Reisman; T. L. Alvarez. "Vergence Variability: A Key to Understanding Oculomotor Variability?" Proceedings of the International IEEE Engineering in Medicine and Biology Society Annual Meeting, New York, NY. Aug 2006.
- Anne Marie Petrock. "Biomedical Engineering: A Conduit for Attracting Women into Engineering." Women in Engineering Programs and Advocates Network (WEPAN) National Conference, Pittsburgh, PA. May, 2006.
- A. M. Petrock.; Dr. S. Reisman; Dr. I. Dardik. "Total wavelet entropy analysis of cyclic exercise protocol on heart rate variability." Proceedings of the IEEE 30th Annual Northeast Bioengineering Conference. 17-18 April 2004 Page(s):91 – 92.
- A. M. Petrock, S. Reisman, I. Dardik. "24-Hour Total Wavelet Entropy Analysis of Cyclic Exercise Protocol." International BioMedical Engineering Society (BMES) Conference, Philadelphia, PA. 2004.
- A. Petrock; S. Reisman. "Wavelet analysis of masseter muscle EMG during emotional provocation." Proceedings of IEEE 29th Annual Northeast Bioengineering Conference. 2003 Page(s):132 – 133.
- K. Jayaraman.; S. Reisman.; A. M. Petrock. "Preliminary assessment of the effectiveness of enhanced external counter pulsation on heart rate variability for heart failure

patients.” Proceedings of IEEE 29th Annual Northeast Bioengineering Conference. 2003. Page(s):124 – 125.

A. Petrock; S. Reisman; S. Weiner; A. Siegel. “Wavelet analysis of masseter muscle activity resulting from stimulation of hypothalamic behavioral sites.” Proceedings of the IEEE 28th Annual Northeast Bioengineering Conference. 2002. Page(s):49 – 50.

S. Reisman, I. Dardik, S. Hagberg, M. Rymer, A. Petrock, A. Stuckey. “Controlled Breathing in Parkinson’s disease during Cyclic Exercise.” 12<sup>th</sup> International Symposium on the Autonomic Nervous System of the AAS, Palm Springs, CA. October 2001.

M. Rymer, I. Dardik, S. Reisman, S. Hagberg, A. Petrock. “Cyclic Activation / Relaxation Exercise: Effects on Cardiovascular Dynamics in Patients with Parkinson’s Disease.” International 17<sup>th</sup> Puijo Symposium, Kuopio, Finland. 2001.

***To Chris and Charlie***, who helped me to laugh, to stay grounded and kept me up to date with style and what was pretty, while I buried my head in the books.

***To Tony***, my research assistant and best friend, who answered the phone during those wee hours in the morning when nothing was working, and kept me laughing even in the face of great adversity. You were my rock when I was in hard places and the pillow that I could rest my worried head upon.

***To Marissa and Charlize, my little angels***: You are my shining light and hope for the future. I can't wait to read *your* dissertation one day!

***Most especially, to mom and dad***: You supported me when I wanted to be the Easter bunny and the first lady president. From my silly goals to my wildest dreams, thank you for being the rock that I built my world upon. Quicquid laudis haec vitae mundum habet, laus tota tuae est.

## ACKNOWLEDGMENT

Particular thanks go to Dr. Stanley Reisman, my advisor, for many years of advice, reassurance and exchange of ideas. The freedom that you gave me to explore my own academic paths, means more than you may ever know. I will always be thankful that BME (in a world of EE) brought me to your door those many years ago. Special thanks to Drs. Ronald Rockland and John Tavantzis for sharing so much of their time and insights with me. Particular thanks to Drs. Matthew Bartels and Ronald DeMeersman for sharing ideas and physiological insights. Finally, great appreciation is extended to Dr. Richard Foulds, who added his expertise and enthusiasm just when I needed it most.

I would like to thank Mrs. Trudy Morse (Grammy Gila) for her unyielding support of biomedical research and, in particular, for her enthusiasm and dedication to NJIT. This work was funded in part by the Malcolm Morse Fellowship, the Vincent DeCaprio Fellowship, the NJ Commission on Higher Education and the NSF.

Thanks to Dr. Rosenberg for being so patient and encouraging as I finished this work. Thanks to Dr. Kane for his tenacity in helping the NJIT scholars get out into the world. Thanks to Mrs. Gonzalez-Lenahan for the knowledge and sanity breaks that she provided, and to Ms. Marlene Masi. Thank you to Ms. Knox at the Women's Center and Dr. Donahue, Mrs. Hulin and Ms. Massey at the Honors College, and Mrs. Raines and Mrs. Clarke at Career Development and Ms. Naporano and Ms. Price in BME, for supporting me from day one at NJIT. Thanks to my fellow graduate students, particularly my BFF, Bruno, Darnell, Jason and Amanda.

Thanks to my family and friends, particularly to Uncle Bill and Auntie Rose, and to Aunt Maddie, to my NJIT sisters and to Shawnee my forever friend. Thanks for always believing in me, especially when I didn't have the strength to do it for myself.

## TABLE OF CONTENTS

Chapter	Page
1 INTRODUCTION.....	1
.	
1.1 Objective .....	1
1.2 Hypotheses .....	2
1.3 Background Information .....	4
1.3.1 Physiological Research Studies .....	4
1.3.2 Signal Processing Research Studies .....	10
1.4 Significant Contributions of this Research .....	13
2 BACKGROUND .....	15
2.1 Physiological Background .....	16
2.1.1 Nervous System .....	16
2.1.2 Cardio-Vascular System .....	21
2.1.3 Heart Rate Variability .....	26
2.1.4 Pulmonary System .....	27
2.1.5 Cardio-Pulmonary Interactions .....	34
2.1.6 Chronic Obstructive Pulmonary Disease .....	36
2.1.7 The Visual System .....	39
2.1.8 Presbyopia .....	50
2.2 Engineering Background .....	52
2.2.1 Wavelet Time-Frequency Distribution .....	52
2.2.2 Brief Background of the Wavelet Transform .....	55
2.2.3 Properties and Implementation of the Wavelet Transform .....	56

2.2.4 Properties of a Signal Required to be Considered a Wavelet .....	59
--	----

**TABLE OF CONTENTS**  
**(Continued)**

<b>Chapter</b>	<b>Page</b>
2.2.5 Haar Wavelet as Illustration of Orthonormality .....	61
2.2.6 Heart Rate Variability and the Wavelet Transform .....	64
2.2.7 Measurement of Non-Linear Variability with Wavelet Entropy .....	53
2.2.8 Wavelet Source Separation .....	72
<b>3 METHODS</b> .....	<b>76</b>
3.1 Cardio-Pulmonary Coupling Simple Model .....	76
3.2 Cardio-Respiratory Data for COPD Study.....	79
3.2.1 Heart Rate Variability .....	79
3.2.2 Subject Population .....	80
3.2.3 Data Acquisition .....	80
3.3 Cardio-Respiratory Data for Presbyope Population.....	82
3.3.1 Heart Rate Variability .....	82
3.3.2 Subject Population .....	82
3.3.3 Data Acquisition .....	83
3.4 Data Analysis .....	84
3.4.1 Critical Variables .....	84
3.4.2 Wavelet Entropy .....	88
3.4.3 K-Means Cluster Analysis .....	90

3.4.4 Wavlet Source Separation .....	91
4 RESULTS .....	97
4.1 Cardio-Pulmonary Coupling Model .....	97
.....

## LIST OF TABLES

<b>Table</b>		<b>Page</b>
2.1	Afferent and Efferent Branches of Cranial Nerves III and X .....	17
2.2	ANS Interaction with Specific Organs Relative to Research .....	20
3.1	Index of Simulation Frequency Multipliers for Transition from Rest to Exercise .....	79
4.1	Statistical Changes in Spectral Power between Pre- and Post-WavS Analysis of Model .....	98
4.2	Confusion Plots for Entropy Classification of COPD Study Populations at Rest and during Exercise .....	102
4.3	Statistical Changes in Overall Spectral Power between Pre- and Post-WavS Analysis of COPD .....	109
4.4	Statistical Changes between COPD and Control Spectral Power between Pre- and Post-WavS Analysis .....	109
4.5	Autonomic Markers Before and After WavS for Resting COPD study .....	111
4.6	Autonomic Markers Before and After WavS for Exercise COPD study .....	111
4.7	Presbyope Study LF Data .....	113
4.8	Presbyope Study HF Data .....	113
4.9	Presbyope Study LF/HF Data .....	113
4.10	Standard Deviations of IIBI Signals of Presbyope Study Population .....	115

## LIST OF FIGURES

<b>Figure</b>	<b>Page</b>
2.1 Parasympathetic and sympathetic branches of the ANS and effector organs .....	19
2.2 The heart .....	23
2.3 Intrinsic conduction system of the heart .....	24
2.4 Neural pathways for the arterial baroreflex .....	25
2.5 Horizontal view of preganglionic parasympathetic cardiac and pulmonary motoneurons .....	26
2.6 Contrasting responses of mean arterial pressure and heart rate .....	27
2.7 Ramon y' Cajal's model for respiratory control .....	30
2.8 Dorsal view of rat brain stem .....	31
2.9 Location of peripheral chemoreceptors .....	33
2.10 Functional organization of CNS control of breathing .....	34
2.11 Cardiovascular and respiratory responses to hypoxia .....	35
2.12 Schematic diagram of human eye .....	39
2.13 The retino-geniculo-cortical pathway in the human .....	41
2.14 Axes of eye rotation .....	42
2.15 Muscles of the eye .....	43
2.16 Gray's anatomy dissection of eye muscles and nerves to display interconnection of each .....	44
2.17 Oculomotor, trochlear and abducens illustrated by cranial nerve number .....	45
2.18 Convergence angle relationship to target distance in vergence eye movements .....	48
2.19 Lens alterations with aging and corrective lenses .....	51
2.20 Time representation of Coif3 Wavelet .....	57

**LIST OF TABLES**  
(Continued)

<b>Figure</b>	<b>Page</b>
2.21 Scaling the mother wavelet .....	58
2.22 Shifting the mother wavelet .....	59
2.23 Haar wavelet .....	62
2.24 Haar wavelet dilated .....	62
2.25 Haar wavelet shifted .....	63
2.26 Haar wavelet scalar relationships .....	63
2.27 Continuous versus discrete wavlet filtering .....	66
2.28 Reconstructing the original signal using inverse discrete wavelet transform ..	67
2.29 Zero insertion between coefficients during reconstruction .....	68
2.30 Representation of periodic versus random signals .....	70
3.1 Individual and summed output of model simulations .....	77
3.2 Rest and exercise cardio-pulmonary model simulations .....	78
3.3 ECG waveform conversion to interpolated interbeat interval .....	81
3.4 Wavelet analysis basis for entropy quantification .....	89
3.5 Wavelet series correlations of both respiration (red) and HRV (blue) to form basis of WavS analysis .....	93
3.6 Flow chart of WavS algorithm .....	94
4.1 Correlation and coherence of input simulated cardiac cycle signal (solid blue) and reconstructed cardiac cycle (red dashed) .....	97
4.2 WavS output for model data analysis .....	99
4.3 Correlated and uncorrelated respiration and HRV signals in time .....	104

**LIST OF FIGURES**  
**(Continued)**

<b>Figure</b>	<b>Page</b>
4.4 IIBI and respiration signals illustrating different gain of respiration signals ...	105
4.5 Output of WavS program applied to resting COPD study data .....	106
4.6 Output of WavS program applied to exercising COPD study data .....	107
4.7 Output of WavS analysis of adaptive prebyope subject breathing at 12 breaths/min [bpm] .....	112
